

Most EW Cell houses are constructed out of timber due to its good electrical resistance properties. This has been the prefer method for many years now, however, Cell house tend to be a very wet environment and timber can rot quite fast and leave the cell house flooring in a dangerous conditions

As well as flooring hand rails can also course a

The old timber decking can be easily be removed along with the timber support beams progressively so as not limit interference with operations

The final result is a new Non Slip, Fire resistant floor which no only of solid construction, but is also looks good

Working with Recycled plastic is easy and can be shaped to fit any design or shape of building and is particularly suited to frequent wet areas such as safety shower bays

Hand railing completes the job and is also made from the same recycled plastic and is secure and robust and unlike timber, free from splinters and

Completed system is a timber free, full recycled flooring, support beams and hand railing installation that is Safe, Strong and will easily out last all its surroundings

The ideal solutions for a high risk and problematic areas, that is easy to
